

Brandon Industries: Superior Finishes with Electrostatic Powder Coating

At Brandon Industries, we are a leading manufacturer of decorative outdoor streetscape solutions, known for our legacy of made-to-last and quality products.

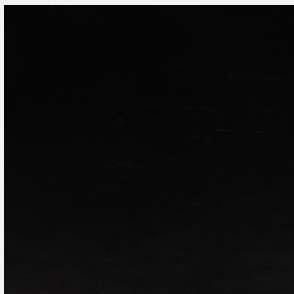

Our advanced electrostatic powder coating process ensures our products are visually appealing and stand up to harsh environments and daily wear and tear, making them a reliable choice for communities, neighborhoods, parks, and more.

What is Electrostatic Powder Coating?

This process uses an electric charge to evenly apply a dry powder coating made of polymer resins, pigments, and curatives to metal surfaces. The grounded metal attracts the negatively charged powder particles, creating a strong and uniform adhesion. The coating is then cured at high temperatures to form a smooth, durable finish.

Our Finishes

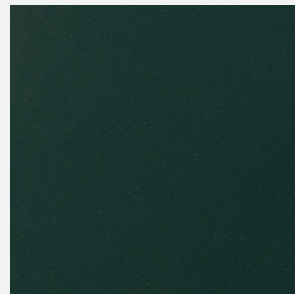

Finish options vary by product. Please refer to the specification sheet or contact our sales team for more information.

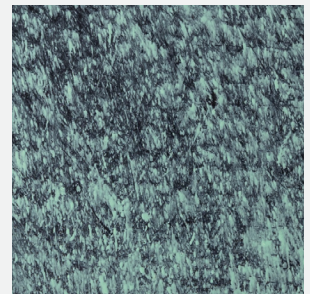

BLACK

DARK BRONZE

DARK GREEN

VERDE GREEN

**Hand painted in our Texas headquarters.*

Key Advantages Of Our Finishes

ENHANCED DURABILITY

Resistant to: UV rays, Corrosion, Pedestrians, Environmental Damage, and Vehicles.

VERSATILE AESTHETICS

Available in various colors, textures, and finishes.

ECO-FRIENDLY EFFICIENCY

Powder overspray is reusable, reducing waste and overall environmental impact.

Brandon Industries is proud to deliver the perfect blend of durability and style, ensuring our products enhance neighborhoods, parks, and city centers for years to come.
